

RFLM-200802MA-299

Two Stage Passive Limiter Module - SMT

Features:

- Surface Mount Limiter Module: 5mm x 8mm x 2.5mm
- Passive High Power PIN Limiter Design
- Frequency Range: 20 MHz to 8 GHz
- High Average Power Handling : 44dBm (CW)
- High Peak Power Handling: 51dBm
- Low Insertion Loss: 1.40 dB
- Low Flat Leakage Power : 20dBm
- Low Spike Energy Leakage: 0.2 ergs
- Recovery Time: 500 nsec
- No external control lines or power supply required
- RoHS Compliant

Description:

The RFLM-200802MA-299 SMT Silicon PIN Diode Limiter Module offer both High Power CW and PeakPower protection in the 20 MHz to 8 GHz frequency range. It is based on a proven hybrid assembly technique utilized extensively in high reliability, mission critical applications. The RFLM200802MA-299 offers excellent thermal characteristics in a compact, low profile 8mm x 5mm x 2.5mm package. The RFLM-200802MA-299 is designed for optimal small signal insertion loss permitting extremely low receiver noise figure while simultaneously offering excellent large input signal Flat Leakage for effective receiver protection in the 20 MHz to 8 GHz frequency range.

The limiter RF circuit characteristics provide outstanding passive receiver protection (always on) which protects against High Average Power up to 44 dBm, High Peak Power up to 51 dBmpulsed (pulse width = 1 usec, duty cycle = 0.1%), maintains low flat leakage to less than 20dBm (typical),and reduces Spike Leakage to less than 0.2 ergs.

ESD and Moisture Sensitivity Rating

The RFLM200802MA-299 Limiter Module carries a Class 1C ESD rating (HBM) and an MSL 1 moisture rating.

Thermal Management Features

The RFLM-200802MA-299 based substrate has been design to offer superior long term reliability in the customer's application by utilizing ultra-thin Au plating to combat Au embrittlement concerns. Also, a proprietary

design methodology has minimized the thermal resistance from the PIN Diode junction to base plate (R_{THJ-A}) to less than $20^{\circ}\text{C}/\text{W}$. The two stage limiter design employs a second stage limiter and quarter wavelength spacer detector circuit which permits ultra-fast turn on of the High Power PIN Diodes. This circuit topology couple with the thermal characteristic of the substrate design enables reliably handling High Input RF Power up to 44dBm CW and RF Peak Power levels up to 51dBm (1 uSec pulse width @ 0.1% duty cycle with base plate temperature at 85°C).

RFLM-200802MA-299 Limiter Module Package Outline Drawing

Notes:

- 1) Metalized area on backside is the RF, DC and Thermal ground. In user's end application this surface temperature must be managed to meet the power handling requirements.
- 2) Back side metallization is thin Au termination plating to combat Au embrittlement (15 u in typ Au plated over Ti-Pd).

Thermal Design Considerations:

The design of the RFLM-200802MA-299 family of Limiter Modules permits the maximum efficiency in thermal management of the PIN Diodes while maintaining extremely high reliability. Optimum Limiter performance and reliability of the device can be achieved by the maintaining the base ground surface temperature of less than 85°C.

There must a minimal thermal and electrical resistance between the limiter and ground. Adequate thermal management is required to maintain a T_{jc} at less than +175°C and therefore will not adversely affect the semiconductor reliability. Special care must be taken to assure that minimal voiding occurs in the solder connection in the areas shade in red in the figure shown below.

Dimensions in inches (mm).

Recommended RF Circuit Solder Footprint for the RFLM200802MA-290

Notes:

- 1) Recommended PCB material is Rogers 4350, 10 mils thick.
- 2) Hatched area is RF, DC and Thermal Ground. Vias should be solid Cu filled and Au plated for optimal heat transfer from backside of Limiter Module through circuit vias to thermal ground.

Part Number Ordering Detail:

The RFLM-200802MA-299 Limiter Module is available in either tube or Tape & Reel format.
