ESD and Moisture Sensitivity Rating

The RFLM-143173HC-150 Limiter Module carries a Class 1C ESD rating (HBM) and an MSL 1 moisture rating.

Thermal Management Features

The proprietary design methodology minimizes the thermal resistance from the PIN Diode junction to base plate. The two stage limiter design employs a two stage detector circuit which enables ultra-fast turn on of the High

Power PIN Diodes. This circuit topology coupled with the thermal characteristic of the substrate design enables the Limiter Module to reliably handling High Input RF Power up to +46 dBm CW and RF Peak Power levels up to +50 dBm (50uSec pulse width @ 20% duty cycle) with base plate temperature at +55°C. The RFLM-143173HC-150 based substrate has been design to offer superior long term reliability in the customer's application by utilizing ultra-thin Au plating to combat Au embrittlement concerns.

RFLM-143173HC-150 Limiter Module Foot Print Drawing

Notes:

- 1) Plain surface is the RF, DC and Thermal ground. In user's end application this surface temperature must be managed to meet the power handling requirements.
- 2) Back side metallization is thin Au termination plating to combat Au embrittlement (Au plated over Cu).
- 3) Unit = mils

Thermal Design Considerations:

The design of the RFLM-143173HC-150 Limiter Module permits the maximum efficiency in thermal management of the PIN Diodes while maintaining extremely high reliability. Optimum Limiter performance and reliability of the device can be achieved by the maintaining the base ground surface temperature of less than +55 °C.

There must be a minimal thermal and electrical resistance between the limiter module and ground. Adequate thermal management is required to maintain a T_{jc} at less than $+175^{\circ}\text{C}$ and thereby avoid adversely affecting the semiconductor reliability. Special care must be taken to assure that minimal voiding occurs in the solder connection in the areas shade in red in the figure shown below.

Recommended RF Circuit Solder Footprint for the RFLM-143173HC-150

Notes:

- 1) Recommended PCB material is Rogers 4350B, 20 mils thick (RF Input and Output trace width needs to be adjusted from the recommended footprint.)
- 2) Plain surface is RF, DC and Thermal Ground. Vias should be solid Cu filled and Au plated for optimal heat transfer from backside of Limiter Module through circuit vias to thermal ground.
- 3) Unit = mils
