Description:

The RFLM-202402QE/F-290 SMT Silicon PIN Diode Limiter Modules offers “Always On” High Power CW and Peak protection in the S-Band region. This family of Limiter Modules are based on proven hybrid assembly technique utilized extensively in high reliability, mission critical applications. The RFLM-202402QE/F-290 offers excellent thermal characteristics in a compact, low profile 8mm x 5mm x 2.5mm package. They designed for optimal small signal insertion loss permitting extremely low receiver noise figure while simultaneously offering excellent large input signal Flat Leakage for effective receiver protection in the S Band frequency range.

The RFLM-202402QE/F-290 Limiter Modules provide outstanding passive receiver protection (Always on) which protects against High Average Power up to +50 dBm (CW), High Peak Power up to +60 dBm pulsed, maintains low flat leakage to less than 14 dBm (typ), and reduces Spike Leakage to less than 0.5 ergs (typ).

ESD and Moisture Sensitivity Rating

The RFLM-202402QE/F-290 Limiter Module carries a Class 0 ESD rating (HBM) and an MSL 1 moisture rating.

Thermal Management Features

The proprietary design methodology minimizes the thermal resistance from the PIN Diode junction to base plate (RTHJ-A). The two stage limiter design employs a two stage detector circuit which enables ultra-fast turn on of the High Power PIN Diodes. This circuit topology coupled with the thermal characteristic of the substrate design

enables the Limiter Module to reliably handling High Input RF Power up to +50 dBm (CW) and RF Peak Power levels up to +60 dBm (25 uSec pulse width @ 5.0% duty cycle) with base plate temperature at +85°C. The RFLM-202402QE/F-290 based substrate has been design to offer superior long term reliability in the customer's application by utilizing ultra-thin Au plating to combat Au embrittlement concerns.

RFLM-202402QE/F-290 Limiter Module Package Outline Drawing

Notes:

- 1) Metalized area on backside is the RF, DC and Thermal ground. In user's end application this surface temperature must be managed to meet the power handling requirements.
- 2) Back side metallization is thin Au termination plating to combat Au embrittlement (Au plated over Cu).
- 3) Unit = mils

Recommended RF Circuit Solder Footprint for the RFLM-202402QE/F-290

Notes:

- 1) Recommended PCB material is Rogers 4350B, 10 mils thick (RF Input and Output trace width needs to be adjusted from the recommended footprint.)
- 2) Hatched area is RF, DC and Thermal Ground. Vias should be solid Cu filled and Au plated for optimal heat transfer from backside of Limiter Module through circuit vias to thermal ground.
- 3) Unit = mils

Thermal Design Considerations:

The design of the RFLM-202402QE/F-290Limiter Module permits the maximum efficiency in thermal management of the PIN Diodes while maintaining extremely high reliability. Optimum Limiter performance and reliability of the device can be achieved by the maintaining the base ground surface temperature of less than 85°C.

There must be a minimal thermal and electrical resistance between the limiter module and ground. Adequate thermal management is required to maintain a T_{jc} at less than +175°C and thereby avoid adversely affecting

the semiconductor reliability. Special care must be taken to assure that minimal voiding occurs in the solder connection in the areas shade in red in the figure shown below.
