

## RFLM-252352Qx-290

### Quasi-Active Two Stage Passive Limiter Module - SMT

#### Features:

- Frequency Range: 2.5 GHz to 3.5 GHz
- High Peak Power Handling: +62 dBm
- High Average Power Handling: +47 dBm
- Low Insertion Loss: <0.6 dB
- Return Loss: >15 dB
- Low Flat Leakage Power: <23dBm
- Low Spike Energy Leakage: 0.25 ergs
- Surface Mount Limiter Module: 8mm x 5mm x 2.5mm
- No external control lines or power supply required
- RoHS Compliant

#### Description:

The RFLM-252352Qx-290 SMT Silicon PIN Diode Limiter Module offer both High Power CW and Peak protection in the 2.5 GHz to 3.5 GHz frequency range. It is based on a proven hybrid assembly technique utilized extensively in high reliability, mission critical applications. The RFLM-252352Qx-290 offers excellent thermal characteristics in a compact, low profile 8mm x 5mm x 2.5mm package. The RFLM-252352Qx-290 is designed for optimal small signal insertion loss permitting extremely low receiver noise figure while simultaneously offering excellent large input signal Flat Leakage for effective receiver protection in the 2.5 GHz to 3.5 GHz frequency range.

The RFLM-252352Qx-290 Limiter Module provides outstanding passive receiver protection (Always On) which protects against High Average Power up to +47 dBm, High Peak Power up to +62 dBm pulsed (pulse width = 70 usec and duty cycle = 3%), maintains low flat leakage to less than 23dBm, and reduces Spike Leakage to less than 0.25 ergs.

#### ESD and Moisture Sensitivity Rating

The RFLM-252352Qx-290 Limiter Module carries a Class 0 ESD rating (HBM) and an MSL 1 moisture rating.

#### Thermal Management Features

The RFLM-252352Qx-290 based substrate has been design to offer superior long term reliability in the customer's application by utilizing ultra-thin Au plating to combat Au embrittlement concerns. Also, a proprietary design methodology has minimized the thermal resistance from the PIN Diode junction to base plate ( $R_{THJ-A}$ ). The two stage limiter design employs a second stage Schottky and quarter wavelength spacer detector circuit which permits ultra-fast turn on of the High Power PIN Diodes. This circuit topology couple with the thermal

characteristic of the substrate design enables reliably handling High Input RF Power up to 50dBmCW and RF Peak Power levels up to 60dBm (25 uSec pulse width @ 5% duty cycle with base plate temperature at +85°C).

Optional RF Coupling Capacitors

The RFLM-252352Qx-290 is offered in three different configurations: no RF coupling capacitors (x=A), a single input RF coupling capacitor (x=B), or both input & output RF coupling capacitors (x=C) as is show in the three options below:

## Absolute Maximum Ratings

@  $Z_0=50\Omega$ ,  $T_A=+25^\circ\text{C}$  as measured on the base ground surface of the device.

Parameter	Conditions	Absolute Maximum Value
Operating Temperature		-65°C to 125°C
Storage Temperature		-65°C to 150°C
Junction Temperature		175°C
Assembly Temperature	T = 30 seconds	260°C
RF Peak Incident Power	$T_{\text{CASE}}=85^\circ\text{C}$ , source and load VSWR < 1.2, RF Pulse width = 70 usec, duty cycle = 3%, derated linearly to 0 W at $T_{\text{CASE}}=150^\circ\text{C}$ (See note 1)	+62 dBm
RF CW Incident Power	$T_{\text{CASE}}=85^\circ\text{C}$ , source and load VSWR < 1.2, derated linearly to 0 W at $T_{\text{CASE}}=150^\circ\text{C}$ (See note 1)	+47 dBm
RF Input & Output DC Block Capacitor Voltage Breakdown		100 V DC

Note 1:  $T_{\text{CASE}}$  is defined as the temperature of the bottom ground surface of the device.

## Solder Re-Flow Time-Temperature Profile

## RFLM-252352Qx-290 Limiter Module Package Outline Drawing

### Notes:

- 1) Metalized area on backside is the RF, DC and Thermal ground. In user's end application this surface temperature must be managed to meet the power handling requirements.
- 2) Back side metallization is thin Au termination plating to combat Au embrittlement (15 u in typ Au plated over Ti-Pd).

## Recommended RF Circuit Solder Footprint for the RFLM-252352Qx-290

### Notes:

- 1) Recommended PCB material is rogers 4350, 10 mils thick.
- 2) Hatched area is RF, DC and Thermal Ground. Vias should be solid Cu filled and Au plated for optimal heat transfer from backside of Limiter Module through circuit vias to thermal ground.

### Thermal Design Considerations:

The design of the RFLM-252352Qx-290 family of Limiter Modules permits the maximum efficiency in thermal management of the PIN Diodes while maintaining extremely high reliability. Optimum Limiter performance and reliability of the device can be achieved by the maintaining the base ground surface temperature of less than 85°C.

There must be a minimal thermal and electrical resistance between the limiter and ground. Adequate thermal management is required to maintain  $T_{j_c}$  at less than +175°C and thereby will not adversely affect the semiconductor reliability. Special care must be taken to assure that minimal voiding occurs in the solder connection in the areas shade in red in the figure shown below. .

Dimensions in inches (mm).
